Product Datasheet

Product: **ProFlex-S Socket Series**

Description:

ProFlex-S is a soft rubber like ethylene based socked material, specially designed to provide increased prosthetic patient comfort and performance.

Proflex-S is silicone modified, producing a dry feeling and low friction surface. Like the original ProFlex series, **ProFlex-S** offers similar performance in flexibility and durability. ProFlex-S is "milky" to white opaque in appearance, depending on thickness.

ProFlex and **ProFlex-S** are made in the USA by Bixby International.

Specifications: Available Gauges: .187", .250", .375", .500" and .625"
Sheet size 48 x 96

Processing: **ProFlex-S** processes like original ProFlex products. Material should be heated in an oven at approximately 350° F for 6 to 10 minutes, depending on sheet thickness. When using a vacuum forming frame, remember to pull slowly for best results.

Caution: Use of Nylon Stockinette over the positive model is not recommended, as **ProFlex-S** can be very tacky when hot.
