

# Ground Protection Mats

Superior protection for your equipment  
and your work environment

Engineered by

## Do you have these safety & maintenance issues on your job site?

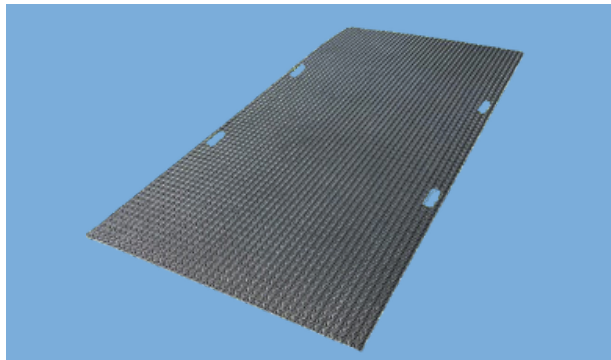

- Heavy, muddy plywood that is hard to lift, transport, & install?
- Plywood losing strength & stability over a short period of time?
- High slip-risk due to plywood's lack of treading or traction?
- Plywood absorbing moisture & causing rotting?

Plywood is NOT designed to provide vehicle or equipment traction, and it cannot withstand a heavy weight load.

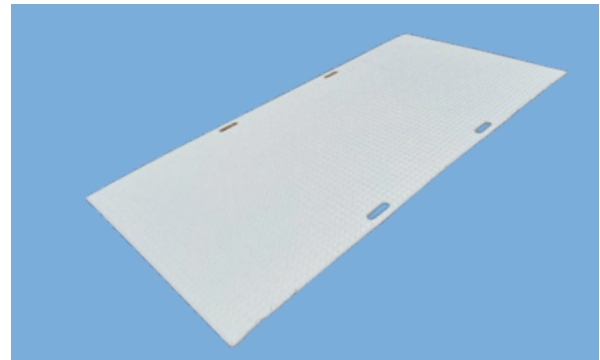

## THE SOLUTION?

UV Resistant 100% Virgin Polyethylene Polymer Ground Protection Mats  
Standard sizing 1/2" thick, 4' x 8'

**Black PE Mats**

**Natural/White PE Mats**

A PE ground mat is robust, strong, and hard-wearing with a possible lifespan of 10+ years.

Our natural-color mats add an additional layer of grass protection as they reflect light and heat.

PE ground mats can be used for a variety of applications and environments. Here are a few examples:

- Construction sites • Temporary roads • Watersheds • Pipelines
- Cemeteries • Oil Fields • Parks • Driveways • Temporary parking lots • Golf courses
- Event Centers

# Ground Protection Mats

Made in the USA 

Strong 1/2" thick, 4'x8' Virgin 100% Polyethylene Sheet

## Replaces plywood for a SAFER, LONGERLASTING solution

Our Cope Ground Protection Mats are created using a durable custom blend of virgin PE resins for a better, longer-lasting alternative to plywood mats.

Our diamond pattern surface enhances traction on 1 side

### Why PE ground protection mats?

Plywood is the most widely utilized material for ground protection, but using plywood presents a variety of drawbacks. Our PE mats are engineered specifically for job site safety and efficiency

Excellent Tensile Strength & Impact Resistance. Our PE mats last a lot longer than wood alternatives, and can easily support up to a 120-ton vehicle.

Our UV Resistant mats can withstand direct sunlight making them weatherable all year long. These mats will hold their color and quality, all while protecting your surfaces.

Resistant to Fuel Spills, Hydraulic Fluid & Industrial Grime. Plywood sheets absorb a lot of moisture, making them heavy, difficult to transport, and susceptible to mold and rot. PE ground protection mats are easy to install and won't absorb water, so you can easily clean, store, and reuse.

Made from 100% virgin polyethylene polymers which can be used over and over again, you'll avoid throwing away plywood, and that saves trees...who doesn't want to save trees?

Let's make your job site safer with Ground Protection Mats Engineered by Cope Plastics.
