Our white-color mats add a layer of grass protection as they reflect light & heat.

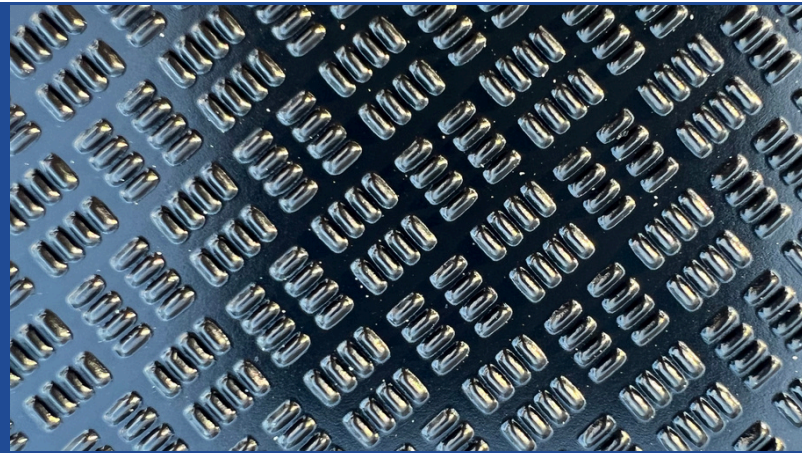

Ground Protection Mats

Strong 1/2" thick, 4'x8' Reprocessed HDPE Mats

Made in the USA 

Replaces plywood for a SAFER, LONGER-LASTING solution

Ground Protection Mats are created using a durable custom blend of reprocessed HDPE for a better, longer-lasting alternative to plywood mats.

Our tread pattern surface enhances traction on 1 side

Why HDPE ground protection mats?

Plywood is the most widely utilized material for ground protection, but using plywood presents a variety of drawbacks. Our PE mats are engineered specifically for job site safety and efficiency

Excellent Tensile Strength & Impact Resistance. HDPE mats last a lot longer than wood alternatives, and can easily support up to a 120-ton vehicle.

UV Resistant mats can withstand direct sunlight making them weatherable all year long. These mats will hold their color and quality, all while protecting your surfaces.

Resistant to Fuel Spills, Hydraulic Fluid & Industrial Grime. Plywood sheets absorb a lot of moisture, making them heavy, difficult to transport, and susceptible to mold and rot. HDPE ground protection mats are easy to install and won't absorb water, so you can easily clean, store, and reuse.

Made from Reprocessed HDPE which can be used over and over again, you'll avoid throwing away plywood, and that saves trees...who doesn't want to save trees?

Let's make your job site safer with Ground Protection Mats.
